

MPS Managed Printer Supplies Program

With **Inland's** Automatic Toner Replenishment System (A.T.R.S.), we take the guess-work, frustration, and extra costs out of supplying your office printers.

This convenient two-part program consists of Data Collection and Supply Management:

Data Collection Service (DCS)

Service Overview:

The Data Collection Service (DCS) includes setup, installation support, and direct access to the MyPrinterManager.com website. Your company will be able to add any networked printers at any site location for up-to-date supply information.

Featured Benefits:

Flexible, Simple Access. You can receive basic information and reports, as well as highly detailed and technical information on all your company's networked printers.

Supply Management System (SMS)

Service Overview:

The Supply Management System (SMS) automatically notifies Inland when consumables are needed and initiates the ordering and fulfillment process. The SMS system bases ordering on usage patterns, not ink or toner level, so you get the right supply for the right device, right on time.

Featured Benefits:

Absolute Order Accuracy. Auto-ordering by your devices eliminates mistakes.

No more expense for returns. Supplies When They're Needed. SMS virtually eliminates rush and overnight orders and costly "emergency onsite stock".

Whether you are a single location with 5 devices, or have 200+ devices located throughout the US, we can customize a support program that best meets your needs.

For more information, please call or e-mail and one of our helpful representatives will assist you.
